TECHNICAL SKILLS

- Programming & DB
- Python
 - SQL
- Data Analytics & BI
- Power BI
 - Tableau
 - Excel
 - Data Cleaning
 - EDA
 - Statistical Analysis
 - Business Intelligence
- Machine Learning
- Scikit-learn
 - Predictive Analytics
 - Feature Engineering
 - Random Forest
 - NLP
- Web & App Dev
- React
 - Firebase
 - HTML
 - CSS
- Tools & MLOps
- Git/GitHub
 - MLflow
 - DagsHub
 - Docker
 - Apache Airflow
 - REST API

THILANI DILMANI SENARATH

DATA ANALYST INTERN

PERSONAL PROFILE STATEMENT

I As a passionate final-year BSc (Hons) undergraduate with a strong background in Information Technology, I am actively seeking an internship opportunity in Data Analysis. With delivering SQL, Python, and Power BI analytics projects, I am capable of Skilled in data cleaning, exploratory data analysis, predictive modelling, and dashboard design, with a strong interest in Business/Data Analyst roles. I possess a good understanding of proven ability to translate raw data into actionable business insight, backed by multiple end-to-end machine learning and BI projects. I am eager to apply my IT knowledge and develop practical experience while making valuable contributions as a Data Analyst Intern.

EDUCATION QUALIFICATION

Bsc(Hons) in Data Science	GPA-3.41/4.00
SLTC Research University	
2023-2027	

ACHIEVEMENTS

- IEEEExtreme 19.0 programming-participation Certificate
- BIOFUSION HACKATHON
organized by University of Jayewardenapura
participation Certificate
- Beginneers for Power BI Certification
- Introduction to Tableau Certification
- SQL (Basic,Intermediate, Advanced) Certification in HackerRank
- InspiHER {Tech} v4.0 HackerRank Competition-Finalized Top Team

PROJECTS

- A-Based Heart Disease Prediction Using Machine Learning**
Developed an AI-powered heart disease prediction system using Machine Learning and the Random Forest algorithm to support early cardiovascular risk assessment. Trained the model using clinical patient data including blood pressure, cholesterol, ECG results, and heart rate.

Technology: Python, Scikit-learn, Matplotlib

- Boston Housing Data Analytics & Visualization dashboard**
Boston Housing dataset to analyze key factors influencing property prices. Performed data cleaning, transformation, and exploratory analysis, and built interactive visualizations in Power BI to highlight trends related to socio-economic conditions, environmental factors, and location.

Technology: Power BI,python,ML

SOFT SKILLS

- Problem-solving
- Critical Thinking
- Presentation skills
- Team working
- Communication skills

- **Smart Restaurant Menu with AI Agent-“Scan, chat and order-your digital waiter on demand”**

Objectives: Implement an AI chatbot for customer interaction and food recommendations.
Provide instant answers to food-related questions such as ingredients and dietary information.
Enable customers to place orders through a chatbot-based ordering system.

Technology: React ,Google Dialogflow ,Firebase,VS Code

Contribution: Designing and developing Hosting and documentation

- **Scam Shield: An Integrated AI and Blockchain Solution for Multi-Category Scam Detection and Immutable Scam Reporting(Ongoing-FYP)**

objectives: Developing an AI-powered blockchain-based scam detection and reporting system to identify, verify, and securely store online scam records. The system uses machine learning and NLP techniques for scam analysis, confidence-based verification, blockchain storage, public dashboards, and advanced scam search functionalities to improve cybersecurity awareness and transparency.

Technology: Flutter, Superbase, Python, Scikit-learn, NLP, Solidity, Blockchain, GitHub,AI

- **Machine Learning project focused on predicting using Telco customer churn dataset in a real-world.**

This project demonstrates a complete ML pipeline—from data preprocessing to live deployment—while integrating modern MLOps tools and practices.

Objectives:
Experiment tracking and version control using MLflow & DagsHub
Workflow orchestration with Apache Airflow
REST API development for real-time predictions
Containerized deployment using Docker Compose

Technology: Dagshub Version control,ML flow,Apache Airflow,Docker,Rest API

Contibution: trained and evaluated multiple models , Logistic Regression, Random Forest, and XGBoost. The final model was selected based on performance metrics such as F1-score(Random Foreset Prediction value 84.5)
